REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest the bipolar transistor as set forth in the claims, including a polysilicon emitter layer, which has dopant inserted, and, in addition, also has impurity atoms inserted at such a concentration level, and inserted under other relevant processing conditions such that vacancies are introduced. The amendment to claim 9 of 1/11/2007 makes clear that the effect of the vacancies is to reduce the resistance, as described at for example the paragraph spanning pages 4 and 5 in the specification (and discussed in the remarks of 11/22/2006), as compared to the case where there would be no vacancies due to the impurity insertion, for example. (In other words, the vacancies act to reduce the resistance of the layer, and do not merely disappear during a subsequent annealing step, for example.) Claim 24 includes the combination of boron dopant with C, P, or Ar impurities to introduce the vacancies. Claim 33 recites that the vacancy-introducing impurity is C. The Morii reference is cited on the enclosed form PTO 892, as a teaching of vacancies introduced into polysilicon, which increase carrier mobility in a channel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
